# Introducing StatBridge

Stat Technologies is pleased to announce the introduction of the "StatBridge" point-of-care computerized screening platform. The StatBridge system operates on an iPad platform complete with its own server and Wi-Fi interface. The system allows for unique and customized management of a corporate screening program, including client registration, collection of all biometric, demographic and HRA data, and automated report generation.

StatBridge was born to bridge the gap between high tech point-of-care testing and low tech paper and pencil data collection systems that have been the industry standard. Today with the successful launch of StatBridge, Health and Wellness screening companies have access to a state of the art technology platform which provides intuitive operation, seamlessly registers clients, collects and secures data storage. StatBridge also provides immediate coaching moments (complete with "wow factor" graphics, and customizable real-time reports.
